MUHAMMAD KASHIF

Mobile: +92-348-5132082 | **Email id:** kashif.icb02@gmail.com **Address:** House No. 1/4-D Street 38, Press Colony G-7/4, Islamabad.

PROFESSIONAL

Results-driven and detail-oriented Software Engineer with 3+ years of experience designing, developing, and deploying scalable web and software solutions. Proficient in full-stack development with strong expertise in languages such as JavaScript, C++, Python , Java, and frameworks like React, Node.js, and Django. Adept at working in agile environments, collaborating with cross-functional teams, and translating business requirements into innovative technical solutions. Passionate about clean code, software architecture, and continuous learning. Proven track record of delivering high-quality products, optimizing performance, and improving user experience

EXPERIENCE

CyberXStudio (*Front End Developer*) **March 2021 – August 2021**

- Worked on AngularJS to develop websites.
- Ensuring proper working of each and every aspect of the website for the customer.
- Ensuring ease of use for the customer so that they can use easily without facing difficulties.

NASTP Institute of Information Technology

Vision System Division (*Software Engineer*) **August 2021 –Present**

- Led the integration of various sensors into the system, overseeing collaboration with third-party vendors and utilizing techniques such as data encoding and decoding to ensure seamless data flow, sensor functionality, and optimal system performance.
- Collaborated closely with cross-functional teams to facilitate smooth data transfer and sensor operations within the large system infrastructure.
- Managed and optimized Web application built with React-Leaflet, providing live air traffic monitoring and real-time data visualization.
- Developed and maintained high-availability applications designed for 24/7 operation, ensuring minimal downtime and optimal performance under continuous usage.
- Implemented features such as dynamic map markers, layers, and popups to display air traffic maintenance, sensor locations, and other critical information to users in an intuitive, user-friendly interface.
- Integrated live air traffic maintenance features, enhancing system reliability and user experience.
- Developed and maintained front-end solutions, ensuring responsiveness and scalability of the application.
- Worked in an agile environment, prioritizing tasks and managing timelines for both sensor integration and web application maintenance.
- Hands-on experience with network protocols including **TCP**, **UDP**, and **WebSocket**, ensuring low-latency, real-time data transmission between sensors and client applications.
- Skilled in diagnosing and resolving network issues to maintain system stability and data integrity.

EDUCATION

Quaid-e-Azam University Islamabad, Pakistan **Sep 2017 - July 2021**

Bachelors in Computer Science

- CGPA: 3.5
- Relevant course work: Data structures and algorithms, OOP, Databases Management, Web engineering, Software engineering, operating system, Compiler construction, Analysis Design and software system, Software construction, Software testing techniques.

Islamabad College for Boys G-6/3 **Sep 2015 – August 2017**

FSC Pre Engineering

- Percentage: 82%
- Courses: Math, Physics, Chemistry

Islamabad College for Boys G-7/4 **Sep 2013- August 2015**

Matriculation (Science)

- Percentage: 88%
- Courses: Math, Physics, Chemistry

TECHNICAL SKILLS

- ✓ C++
- ✓ Python
- ✓ React Native
- ✓ Problem Solving
- ✓ Java
- ✓ React JS
- ✓ Software Engineering skills
- ✓ Communication Skills
- ✓ JavaScript
- ✓ Project Management Skills
- ✓ Databases Management System

PROJECTS

Vehicle Management and Monitoring System (Mobile App/React Native - FYP)

A new buyer with no prior knowledge about the maintenance of the vehicle and can cause very huge maintenance bill.

This Problem can be solved with the help of Vehicle Monitoring System, after getting the type of vehicle, it can generate prompts about when to check for different parts/areas of the vehicle e.g. Battery acid, Coolants. Tire Air Pressure, etc. App will also keep record of all the maintenance history and visits to workshop and can help to identify the quality of the vehicle.

Horticulture Management System (Desktop app/java)

Since application process is conventional form of system where they (horticulture cell) usually place an order manually which involves lot of paper work and takes more time in accomplishment of any order as there is lot of process involves which needs to be followed. However, software system helps them to place an order electronically i.e. through system. Moreover, software is based on artificial intelligence we can save specific types of order for our regular customer for specific future dates which automatically pop-ups before the time of next order.

HOBBIES

- ✓ Cricket
- ✓ Football
- ✓ Badminton
